

# Policy + Design =

Involve people impacted by policy alongside other stakeholders when framing the 'policy problem' and outcomes/benefits right at the start... help ensure we're responding to the right problem and seeking the right outcomes.

# Policy + Design =

Develop current-state and future-state scenarios that help decision makers, service providers and citizens imagine and weigh up the implications of different policy options.

# Policy + Design =

Make visible system dynamics, attitudes and behaviours that will affect how the issue is framed, as well as the effectiveness of the response.

# Policy + Design =

Understand how government policies combine to impact people in 'real life', by visualising the different policies, organisations, teams or services an individual or whānau comes into contact with over a period of time.

# Policy + Design =

Better gauge what is required to achieve policy change through understanding and empathy for all the people in a policy ecosystem... including those in decision-making roles, service delivery roles, whānau and community members.

# Policy + Design =

Create prototypes that enable people to interact with policy while it's still at an early stage, and provide meaningful feedback on the implications of different options or choice.

# Policy + Design =

Give form to abstract ideas – such as new laws, complex systems, or concepts of governance – using visuals, prototypes and interactive activities... so they become sharable, contestable and alternates can be more readily explored.

# Policy + Design =

Integrate qualitative and quantitative data to build a more comprehensive, compelling and accessible picture of the policy domain and policy impacts to support decision-making.

# Policy + Design =

Use prototyping to connect policy and delivery, and better understand what delivery mechanisms will work and should be supported if the policy is to enable the desired outcomes.

# **Policy + Design =**

Use playful processes and safe spaces to build people's confidence and capability to collaborate.

# **Policy + Design =**

Build trust in government, service resilience and community capability by designing with local people in the leadership role.

# Policy + Design =

Ensure there is a platform for relationships with Māori where Māori values, world views, tikanga, cultural narratives and visual identity are appropriately expressed.

# Policy + Design =

Test assumptions early on about how things work, what is needed, what is most important and what can be delivered, using tools and methods like ethnography, behavioural insights, system mapping and prototyping.

# Policy + Design =

Use 'walkthroughs' of insights and possible directions at key intervals, to achieve understanding and buy-in for policy change among decision-makers, delivery staff and stakeholders, who may be time-poor and lack subject matter expertise.

# Policy + Design =

Use maps and scenarios to show how resources, decision-making, networks and workflows might be reconfigured in future states... helping people anticipate the complex structural, cultural and behavioural aspects of implementing major change.

# Policy + Design =

Evaluate current policy drawing on insights from existing co-design initiatives which show how people are experiencing policy on the ground, including combinations of separate policies.

# Policy + Design =

Use existing co-design projects to inform future policy, by observing how well services are delivering the intended policy outcomes and barriers, gaps and opportunities that require legislative or policy (rather than service) solutions.

# Policy + Design =

Use co-design to better understand what is needed from policy in different local contexts and cultural settings and how local strengths and leadership can be involved.

# Policy + Design =

Build practice-based knowledge from collecting and communicating learning from successive projects.

# Policy + Design =

Use tikanga and Māori design principles to allow for the dynamics of different iwi, different settings and different needs.
